What If? and Why Not?

How to Transform Your Fears Into Action and Start the Business of Your Dreams

JEN GROOVER

Starting your own business is hard. But the biggest obstacles often have less to do with time and money, and more to do with fear and doubt.

In *What If? and Why Not?* serial entrepreneur and small business advocate Jen Groover—creator of the Butler Bag and creator and host of Launchers Café, an online community for entrepreneurs—shows you how to transform your fears into action by rethinking the negative questions that can lead to failure before you even get started.

Being an entrepreneur, Groover says, isn't just about selling a product. It's about personal growth—about taking your vision and bringing it to fruition, and about always pushing yourself to take that vision further.

Groover walks you step by step through 10 negative “What If?” questions—What if I don't know what I'm doing? What if I don't have the money? What if I fail?—and how to turn them around by asking yourself: What if I can learn? What if I don't need much money? What if I succeed? She also asks “What Not?”: Why not find a mentor or take a class? Why not ask for investors? Why not try?

With dozens of personal stories from successful entrepreneurs in areas as diverse as dog-walking and handbag-invention, plus practical advice for every step of your journey, *What If? and Why Not?* will inspire you to launch the business of your dreams.

Sex and War

How Biology Explains Warfare and Terrorism and Offers a Path to a Safer World

MALCOLM POTTS AND THOMAS HAYDEN

Sex and War asks the basic questions: Why is war so fundamental to our species? And what can we do about it?

Scientist Malcolm Potts and journalist Thomas Hayden combine rich personal experience and research with an illuminating analysis of warfare and terrorism to show that aggression against our own species is primarily a male behavior, rooted in deep evolutionary impulses and predispositions. Battling neighboring groups of humans helped our male ancestors—the victors in early raids and wars—to survive and outcompete their rivals.

Sex and War: How Biology Explains Warfare and Terrorism and Offers a Path to a Safer World draws on a wealth of archaeological, historical and biological sources to trace the origins of warfare, terrorism, slavery, sexual repression and the subjugation of women through history.

Sex and War is the first serious attempt not only to understand the origins of war and terrorism, but also to use our emerging knowledge of human evolution to lay out a rational roadmap toward greater peace and security.

Essays on the Anita Blake, Vampire Hunter Series

EDITED BY LAURELL K. HAMILTON

A scintillating collection of essays on the No. 1 New York Times bestselling Anita Blake, Vampire Hunter series, edited by series author Laurell K. Hamilton

Laurell K. Hamilton's Anita Blake, Vampire Hunter series is a literary sensation, thanks to its strong female hero, well-fleshed (both literally and literarily) characters and unabashed attitude toward sex. The world Hamilton has created is powerfully compelling and stunningly complex—and it gets deeper, richer and more perilous with every book.

Straddling the series' dominant themes of sex and power, *Ardeur* gives Anita fans a deeper look into the dynamics, both personal and political, that have kept readers fascinated throughout the run of the series. Why is the *ardeur* the very best thing that could have happened to Anita, personally (aside from all the sex it requires her to have with hot men)? How is Anita's alternate United States a logical legal extension of our own? And as the series continues, what other bargains might Anita have to make with herself and others in order to keep the people she loves safe from harm?

The collection includes essay introductions by Hamilton, giving context and extra insight into each essay's subject.

Stealing Greatness

How Steroids Wrecked Baseball's Record Book

JOHN D. CAPPELLO

"Baseball fans, some of whom serve in Congress, justifiably want to look out for baseball's statistical record, to protect the heroic from the fake. Yet the tragedy derives not from the fact that the game's venerated statistics are affected by steroids. It's that they will never really tell us whose, or how."

— Alan Schwarz, author of *The Numbers Game: Baseball's Lifelong Fascination with Statistics*

It's generally agreed that the level of impact steroids have had on baseball statistics—as well as who used—is impossible to estimate. But not anymore. A new analysis by baseball statistician John D. Cappello allows us to not only quantify the impact of steroids but to identify specific players whose statistics raise suspicions of steroid use.

Cappello's analysis of more than 100 years of statistics show that, once a baseball player reaches the age of 28, it is virtually impossible for him to significantly improve his home run hitting ability. Even the best players in baseball history—players like Hank Aaron, Willie Mays and the legendary Babe Ruth—experienced only modest gains, if any. Yet in the 1990s, the best ballplayers started hitting home runs up to 200 percent faster than their younger selves . . . with no clear explanation as to why.

In *Stealing Greatness*, Cappello profiles the 22 players his analysis found to be "Career Transformers": Barry Bonds, Mark McGwire, Rafael Palmeiro and 19 others who, in mid-career, inexplicably became unrecognizably superior players.

Lyrically written with a deep knowledge of and profound appreciation for the game, *Stealing Greatness* demonstrates the likely extent of steroids' impact on the record book and discusses how best to judge the accomplishments of a generation of players forever marked by the suspicion of the Steroid Era.

JOHN CAPPELLO received his bachelor's and master's degrees in computer engineering from Drexel University in Philadelphia. As president of Optimal Design, Inc., he has provided hardware design services to the broadband, telecommunication and medical industries since the early 1990s. Cappello's most recent research presentations to the Society of American Baseball Research (SABR) are featured on his Web site www.baseballengineer.com. He lives with his wife and two children in South Jersey.

The debate over the impact of steroids on baseball is over: A new statistical approach clearly reveals the enormous impact steroids have had on the record book—and identifies 22 suspicious players

Biocentrism

How Life and Consciousness are the Keys to Understanding the True Nature of the Universe

ROBERT LANZA, MD, WITH BOB BERMAN

Our understanding of the universe is turned on its head in this brilliant title written by two of the nation's most influential scientists

Every now and then a simple yet radical idea shakes the very foundations of knowledge. The startling discovery that the world was not flat challenged and ultimately changed the way people perceived themselves and their relationship with the world. For most humans of the 15th century, the notion of Earth as a ball of rock was nonsense. The whole of Western, natural philosophy is undergoing a change again, increasingly being forced upon us by the experimental findings of quantum theory, and at the same time, moving toward doubt and uncertainty in the physical explanations of the universe's genesis and structure. *Biocentrism* completes this shift in worldview, turning the planet upside down again with the revolutionary view that life creates the universe instead of the other way around.

In this paradigm, life is not an accidental byproduct of the laws of physics. *Biocentrism* takes the reader on a seemingly improbable but ultimately inescapable journey through a foreign universe—our own—from the viewpoints of an acclaimed biologist and a leading astronomer. Switching perspective from physics to biology unlocks the cages in which Western science has unwittingly managed to confine itself. *Biocentrism* will shatter the reader's ideas of life—time and space, and even death. At the same time it will release us from the dull worldview of life being merely the activity of an admixture of carbon and a few other elements; it suggests the exhilarating possibility that life is fundamentally immortal.

The Vision Revolution reveals cutting-edge research into the field of human vision from leading evolutionary scientist and neurobiologist Mark Changizi

Primates evolved binocular vision (both eyes facing forward) so that they can see in three dimensions, critical as they jumped from branch to branch. Higher primates developed color vision to better hunt out ripe fruit. Optical illusions succeed because they exploit the limitations of our visual processing. Wrong!

All of these beliefs are false, as groundbreaking research by evolutionary scientist and neurobiologist Mark Changizi now reveals. Changizi's research centers on the "why" of human vision. Why do we have binocular vision? Why do we see in color the way we do? Why do optical illusions work? And why are we able to absorb information by reading a very new invention from an evolutionary perspective more readily than by hearing, which we've evolved to do over hundreds of thousands of years?

The Vision Revolution answers these questions and proves, with the detailed results of Changizi's fieldwork, that the answers are very different than traditionally believed. A radically new perspective of human vision is now emerging. *The Vision Revolution* is upon us.

The Amazing Monarch

The Secret Wintering Grounds of an Endangered Butterfly

WINDLE TURLEY

Each September, millions of monarch butterflies, each weighing only a few grams, begin a journey of up to 2,800 miles from Canada and the Northeast to Transverse Neovolcanic Mountains, 150 miles southwest of Mexico City. The monarch is one of the few insects capable of such a journey (it is capable of trans-Atlantic crossings as well). Amazingly, this migration only takes place every three to five generations, but, somehow, by the last week of October, they arrive at the same small groups of oyamel fir trees their ancestors populated the year before. The handful of roosting sites, located at about 10,000 feet altitude, may contain 20 to 30 million monarchs in a single site only a few acres in size.

In early March, the monarchs mate and start their journey back north. Along the way, the female lays her eggs on milkweed plants and dies. The eggs become larvae, or caterpillars, then pupas and transform into butterflies. These then mate and continue their journey, find another milkweed, lay eggs and die. They will have lived only 60 to 90 days. The process continues for 2,500 miles and three to five generations until they find their summer home in the North.

The wintering grounds of the monarch were unknown to outsiders until 1975. *The Amazing Monarch* captures a set of truly stunning pictures of the monarch, considered by many to be nature's most beautiful butterfly, in its rarely seen winter home.

How Colleges Have Given Up on Educating Your Child and What You Can Do About It

CRAIG BRANDON

MARKETING

- ♦ Author's blog receives 300 views a week
- ♦ Will include a list of "subprime" colleges parents should be cautious of

Former education reporter and college instructor takes readers inside today's colleges to reveal the widespread erosion of education—and how parents can protect their children

Colleges look much the same as they did five or 10 years ago, but a lot has changed behind the scenes. While some mixture of study and play has always been part of college life, an increasing number of schools have completely abandoned the idea that students need to learn or demonstrate that they've learned. Financial pressures have made colleges increasingly reluctant to flunk anyone out, regardless of performance, although the average length of time to get a degree is now five years, and for many students it's six or more. Student evaluations of professors—often linked to promotion and tenure decisions—have made professors realize that applying tough standards, or any standards, only hurts their own career progress.

The worst of these schools are the "subprime" colleges, where performance standards and accountability have been completely abandoned. Students enjoy a five-year party with minimal responsibilities while their parents pay the bills. And after graduation, former students are frequently unable to find work in their chosen fields, thanks to their school's reputation with employers, and unable to afford the payments on sizeable student loans.

The subprime colleges, which "teach" a significant percentage of college students, are only the tip of the iceberg. All colleges, even the most elite, have moved in this direction. If you are a parent sending your child to college, *The Five-Year Party* will give you critical information you need about what is really happening at your child's college, and what you can do to ensure help your child gets a real education.

Fit Soul, Fit Body

9 Keys to a Healthier, Happier You

MARK ALLEN AND BRANT SECUNDA; FOREWORD BY STEPHEN R. COVEY,
AUTHOR OF *THE 7 HABITS OF HIGHLY EFFECTIVE PEOPLE*

Legendary Ironman Mark Allen and world-renowned shaman Brant Secunda show you how to become truly fit from the inside out and take your life to the next level

Let's face it: fitness goes far beyond how long it takes to walk or run a mile. When you're stressed out, emotionally drained, overworked, overweight and ungrateful of your physical body, you can't get much of anything accomplished—at work, at home, on the race track, wherever and in whatever capacity. Put simply, when you're spiritually unfit, life is a greater challenge. That mythical "balance" you've always dreamed of achieving is just that—a myth. But not anymore.

Mark Allen was one of the top triathletes in the world but struggled to get past the barriers that were preventing him from winning the grueling Ironman World Championship triathlon in Kona, Hawaii.

Then he began studying with Brant Secunda, healer and teacher in the Huichol Indian tradition of Mexico. Brant is the only Westerner to have completed a 12-year apprenticeship with Don José Matsuya, the revered Huichol Indian shaman. Brant taught Mark the spiritual and healing exercises that allowed him to integrate his physical and psychological fitness, which led to Mark's unprecedented success. Mark went on to win a never-before-achieved six Ironman triathlons in a row and was called the "World's Fittest Man" by Outside magazine.

Now, Brant and Mark have integrated their wisdom into one book, providing practical tools you can adapt to your lifestyle and achieve results you never thought possible.

Startling Implications for Diet, Weight Loss and Long-term Health

T. COLIN CAMPBELL, PHD, AND THOMAS M. CAMPBELL II

Even today, as trendy diets and a weight-loss frenzy sweep the nation, two-thirds of adults are still obese and children are being diagnosed with Type 2 diabetes, typically an “adult” disease, at an alarming rate. If we’re obsessed with being thin more so than ever before, why are Americans stricken with heart disease as much as we were 30 years ago?

In *The China Study*, T. Colin Campbell, PhD, details the connection between nutrition and heart disease, diabetes and cancer. The report also examines the source of nutritional confusion produced by powerful lobbies, government entities and opportunistic scientists. The New York Times has recognized the study as the “Grand Prix of epidemiology” and the “most comprehensive large study ever undertaken of the relationship between diet and the risk of developing disease.”

The China Study is not a diet book. Dr. Campbell cuts through the haze of misinformation and delivers an insightful message to anyone living with cancer, diabetes, heart disease, obesity and those concerned with the effects of aging.
